DVD

weeks here - in some days gibts in addition more information.

Hardly one is times one week away - already it hails DVD pieces of news. Like that are now all important US film uS-Film-Studios jumped up on the data processing express train (as the latter still Dreamworks had been missing). That means it probably that Mr. gave play mountain up its in relation to restraint the DVD. Additionally there are rumors that Titanic at the 8.Dez. is to appear on DVD.

In addition, it gives to report negative: In England stocks and Geschaeftsraeme were searched by DVD senders and all US disks were seized. It is placed charge because of spreading by Raubcopien - and that, although it concerns quite normal region 1 DVD's. One argues that these films are not licenced for the sales in other regions - and therefore a Raubcopie represent. For several dealers that will probably mean the bankruptcy. One can reread more details here and here.

I hope that will not occur such a thing in Germany - it would harm the home cinema scene much. I think, a larger market for R2-DVDs is probably to be produced by such internal messages.

Apropo R2-DVD's: There is also an update of the DVD counting.
